

Sandra Margol

Software Developer | Frontend Architecture | Real-Time Systems

London, UK • 07429 226 612 • sandra.margol@hotmail.com • [GitHub](#) • [LinkedIn](#) • [Portfolio](#)

PROFILE

Frontend-focused software developer with 3+ years' commercial experience at measurable.energy, where I own frontend architecture across customer-facing IoT energy platforms. Specialise in React.js, SvelteKit, TypeScript, and real-time data systems built on AWS, WebSockets, and Socket.IO. Comfortable across the stack with Node.js, Express, and PostgreSQL, and continuing to grow backend and cloud depth.

EXPERIENCE

Software Developer - [measurable.energy](#) Jan 2023 – present

VC-backed Series A IoT energy startup building AI-powered smart sockets that automatically identify and eliminate wasted energy in buildings. Small, dynamic measurable.energy team - broad ownership and end-to-end work across ambiguous problems.

- **Own** frontend architecture across customer-facing IoT energy platforms, acting as the primary technical authority for frontend decisions.
- **Led delivery of** customer dashboards with real-time data visualisation for IoT energy monitoring, built in SvelteKit, TypeScript, Tailwind CSS, and DaisyUI.
- **Drove** testing migration from Cypress to Vitest and Playwright - improved CI/CD debugging visibility, cut paid tooling costs, and simplified pipeline maintenance.
- **Extended** and improved a real-time notification system using AWS SQS, S3, WebSockets, Socket.IO, and Sequelize ORM, processing event-driven messages to power live frontend updates.
- **Designed** custom SVG device visualisations and socket components in Figma, then implemented for production use across the platform.
- **Collaborated** with product and engineering on technical discovery - defining feasibility, architecture direction, and implementation strategy for new features.
- **Implemented** frontend authentication including token refresh, secure cookies, CORS, protected routes, and session management in SvelteKit.
- **Built** backend APIs in Node.js, Express, and Sequelize ORM against PostgreSQL - including data modelling, querying, persistence and containerised local development using Docker.
- **Wrote** automated component and end-to-end tests in Vitest and Playwright, and participated in code reviews and production debugging across the stack.

Administrator - Franklin House Care Home Jan 2014 – Jan 2023

- Managed payroll and resident financial administration in a fast-paced environment alongside studying for a self-taught transition into software.

Healthcare Assistant (Bank) - Hillingdon Hospital NHS Trust Sep 2014 – Sep 2018

- Worked across high-pressure NHS environments requiring teamwork, adaptability, and clear communication.

KEY SKILLS

- **Languages:** TypeScript, JavaScript, HTML5, CSS3
- **Frontend:** React.js, SvelteKit, Tailwind CSS, DaisyUI, Figma
- **Backend:** Node.js, Express, Sequelize ORM, REST APIs
- **Data & Cloud:** PostgreSQL, AWS SQS, AWS S3, WebSockets, Socket.IO
- **Testing:** Vitest, Playwright, Cypress, CI/CD pipelines
- **Tools:** Git, GitHub, GitLab, Docker, Postman, VS Code, Jira
- **Security:** Frontend auth flows, token handling, CSRF, CORS, secure cookies, session management

SELECTED PROJECTS

Cryptoverse - React, Redux, Ant Design, third-party APIs. sandrascryptoappreact.netlify.app

Real Estate - React, Next.js, Chakra UI, third-party APIs. realestate-sandram92.vercel.app

EDUCATION & TRAINING

- The Complete ReactJS Course (Basics to Advanced) - Udemy, 2022
- Computer Science 101: Master the Theory Behind Programming - Udemy, 2022
- Complete Web Development Bootcamp - Udemy, 2021–2022
- NVQ Level 3 in Business Administration - Lifetime, 2018–2022
- English and Mathematics (Level 2) - T2 Business Solutions, 2012–2013
